

EBrowser

Modern interface with enhanced customization and enterprise controls, ideal for both casual and enterprise browsing.

EBrowser is a dynamic web browser optimized for enterprise use, enhancing workflow efficiency and security with robust features tailored for professional environments. Additionally, it offers an intuitive interface that supports casual browsing, complete with Unitech app integration and an open SDK for extensive web development capabilities. This makes EBrowser the ideal choice for enterprises seeking to enhance productivity while also accommodating personal browsing needs.

Key Benefits

Modern and Intuitive User Interface

Enjoy a user-friendly platform that feels familiar yet innovative, allowing for an effortless transition from other browsers, enhancing user engagement and satisfaction. Just like using the Chrome browser.

Dual-Use Capability

Whether you're browsing for business or pleasure, EBrowser's dual-use design ensures it is equipped to handle enterprise-grade tasks with stringent security demands and casual browsing with ease, offering a flexible tool for all your browsing needs.

Customizable UI

Adapt the browser default interface to fit your preferences, with extensive UI customization options that support a personalized and enterprise browsing experience.

Open SDK for Developers

Harness the JavaScript-based EBrowser SDK to develop robust web applications that integrate deeply with Unitech hardware, providing capabilities comparable to native Android apps, ideal for elevating enterprise web solutions and allowing enhanced control over system settings and file management.

Seamless Unitech App Integration

EBrowser is part of the Unitech app universe, providing a holistic suite of services that perfectly integrates with other Unitech applications, optimizing your workflow and system management.
